FOREWORD

The Bureau of Commercial Fisheries through its Division of Economic Research is supporting a project to obtain, by statistical survey, the patterns of fish product purchases according to socio-economic characteristics of households. Market Facts, Inc. has been contracted to carry out the survey. Fifteen hundred households are being surveyed by completing a diary of fish purchases. The participants replicate the U. S. population by geographic region and cover a wide variation of income, family size, occupation, and age, as well as race and religion. This year-long survey was undertaken because the marketing research program of the Bureau is seriously restricted without this basic information on factors affecting the ultimate use of fishery products. At the present time, changes in demand can only be related to aggregated information on national income, population and prices. The ability to predict changes by use of the available information is quite limited. The survey data will enable the Bureau to determine how the various characteristics of the population cause shifts in demand, and is expected to greatly improve predictive capabilities. These data will be used during the coming year in this research effort.

There is also wide interest in the data as such. It is expected that it will greatly enhance the understanding of fish buying patterns in the U. S. Therefore, this report is being issued which summarizes the second of four quarters of the survey. Reports of the subsequent quarters and a final summary will be issued as the data are obtained.

EXPLANATORY NOTES

This report contains the response of 1,619 households with a total of 4,966 persons. These responses were summarized by major fish products, the measurement of consumption, and the socio-economic characteristics. By columns on each page, the data are as follows: (1) the total number of times the purchase was made; (2) the total number of persons for which the item was purchased; (3) the total number of pounds purchased by survey participants; (4) total dollars spent on the item; (5) the price per pound found by dividing column (4) by column (3); (6) the pounds purchased per household found by dividing column (3) by the number of households in the socio-economic category; and finally, (7) the pounds per person or per capita found by dividing column (3) by the number of persons in the socio-economic category. In addition, purchases are classified by month, and by the six diaries (approximately a two-week period) which were returned by participants for preparation of this report.

The goal of the Division of Economic Research is to engage in economic studies which will provide industry and government with costs, production and earnings analyses; furnish projections and forecasts of food fish and industrial fish needs for the U. S.; develop an overall plan to develop each U. S. fishery to its maximum economic potential and serve as an advisory service in evaluating alternative programs within the Bureau of Commercial Fisheries.

In the process of working towards these goals an array of written materials has been generated representing items ranging from interim discussion papers to contract reports. These items are available to interested professionals in limited quantities of offset reproduction. These "Working Papers" are not to be construed as official BCF publications and the analytical techniques used and conclusions reached in no way represent a final policy determination endorsed by the U. S. Bureau of Commercial Fisheries.
